PERSPECTIVES

Incubating Farmer Producer Companies: The Missing Middle

277

Richa Govil and Annapurna Neti

Abstract: Thousands of farmer-producer companies (FPCs) have been registered in India due to national and state policies. Given their resource-constrained environments, most FPCs face myriad challenges and are struggling to become viable. While the policies provide for incubation support for FPCs, the level of support has been inconsistent and inadequate. This paper proposes a framework for classifying FPCs and their differing incubation needs and advocates for a stronger incubation ecosystem for FPCs, moving away from a one-size-fits-all approach. It also suggests prioritising incubation support for an oft-overlooked category of FPCs with the potential for generating remunerative returns.

Keywords: Farmer Producer Companies, Incubation Support, Policy, India

RESEARCH

Weight Restriction Approach in a Two-stage Network Structure: A DEA-based Approach

290

Azam Pourhabib Yekta and Mahnaz Maghbouli

Abstract: The standard data envelopment analysis model aimed to maximize the efficiency scores using the most favorable input/ output weights. In two stage network structures, the presence of intermediate undesirable measure leads to distinct domain of weight restriction study. In presence of undesirable intermediate measure and equipped with non-cooperative game theory, this study develops a joint weight restriction approach to derive a common set of weights. Concurrently, the overall efficiency of the system can be evaluated. Numerical instances of 34 OECD countries in 2012 has presented to elucidate the details and applicability of the proposed method.

Keywords: Data envelopment analysis (DEA), non-cooperative approach, joint weight restriction, two-stage network structure

Six-sigma Methodologies in Airlines Operations

302

Ramesh Bollapragada and Vivian Chan

Abstract: In this paper, we illustrate the key improvement indicators, their performance variance, and their respective financial impacts on airline operations. Through the six sigma process improvement methodology (DMAIC), this paper presents the passengers' expectations, current performance level, compensation expenses due to nonconformities, root causes of the nonconformities, and means to reduce performance variance and improve process to achieve cost savings. The research methods consist of data collection from several sources such as SITA, U.S. Aviation consumer reports, Aviation accident statistics from multiple sources. Our results indicate airlines can save billions of dollars annually once six sigma operational processes are reached.

Keywords: Six Sigma, DMAIC, Service Operations Airline Industry, Quality Metrics

Abstract: The supply chains in automobile manufacturing face numerous risks, impacting organisational performance due to improvised responses and inadequate contingency plans. This study employs the PROMETHEE methodology to identify and rank critical risk factors (CRFs) in the Indian automotive manufacturing supply chain. Thirteen risks were evaluated across five industry criteria using entropy methodology to ensure a robust and objective assessment of each risk factor. Risks related to delays, management, and suppliers emerged as the most severe. A comparison with VIKOR and TOPSIS methods was conducted. Prioritising risk factors through this approach aids organisations in addressing threats effectively.

Keywords: Risks, Manufacturing, PROMETHEE, VIKOR, TOPSIS
